EDUCATION

Keele University **Stoke-on-Trent, UK**
MSc Data Science and Artificial Intelligence (Distinction, 80.5%) *Graduation Date: December 2025*

- Relevant Modules: Machine Learning, NLP, Distributed Intelligent Systems, Cloud Computing, Data Analytics, AI Systems Design, Mathematics for Data Science & AI.

Jai Prakash University **Chhapra, India**
Bachelor of Science (First Class)

WORK EXPERIENCE

Krislingua German Institute **Greater Noida, India**
Business Development & Data Analytics Executive *Sep 2022 - Aug 2024*

- Architected an automated data pipeline to ingest, clean, and structure cross-functional lead metrics, accelerating day-to-day data retrieval by migrating fragmented records into a centralized SQL and Airtable database.
- Formulated data-driven market expansions and targeted demographic interventions, driving an approximate 20% improvement in enrollment performance through rigorous market trend analysis and hypothesis testing.
- Overhauled regional marketing strategy by building interactive Tableau dashboards to track student engagement patterns, providing executive stakeholders with real-time insight into underperforming outreach channels.
- Spearheaded weekly cross-functional alignment sessions to translate complex KPI dashboard insights into actionable commercial strategies, significantly accelerating senior leadership's strategic intervention response times.
- Instituted strict data governance and privacy protocols across the enrollment pipeline, mitigating compliance risks and data anomalies by implementing automated schema validation and access control rules on all client databases.

Technical & Project Experience

MSc Dissertation Project **Keele University, UK**
Agentic AI System: Double-Marking Workflow Automation *2025*

- **Technologies:** Python, Streamlit, LangGraph, LangChain, RAG, FAISS, Sentence Transformers, Claude API, Gmail SMTP
- Designed and built a locally deployable agentic workflow automating a multi-marker grading pipeline, preserving human authority.
- Implemented state-based logic covering agreement detection, disagreement escalation, and Microsoft Form-based audit logging.
- Automated Gmail SMTP notifications delivered in under 5 seconds per event, cutting manual coordination handoff overhead.
- Built a RAG advisory module (FAISS + Claude API) to generate rubric-aligned feedback without influencing official marks.

Independent Development Project **Remote**
Airbnb Price Prediction & Spatial Analytics: London Market *2024*

- **Technologies:** Python, Scikit-learn, XGBoost, LightGBM, PySpark, SHAP, Geospatial Analytics
- Built an ML pipeline with 113 engineered features; achieved R^2 of ~0.70 after rigorous data leakage correction.
- Applied SHAP analysis and geospatial analytics to surface key pricing drivers including capacity, location, and recency.
- Achieved 46x aggregation speed improvement over Pandas by running scalability benchmarks on a 626k-row dataset with PySpark.

SKILLS & CERTIFICATIONS

Programming & Data: Python, SQL, Data Pipelines, Pandas, NumPy, Feature Engineering, PySpark, Hypothesis Testing, Statistical Analysis
Machine Learning & AI: Scikit-learn, XGBoost, LightGBM, SHAP, Time-Series (ARIMA/SARIMA), RAG, Agentic AI, LangGraph, LangChain, FAISS
Tools & Platforms: Streamlit, Git, CI/CD, Docker, REST APIs, Jupyter, AWS, Tableau, Airtable, Ollama, Kubernetes
Certifications: Machine Learning Specialization, Math for ML (DeepLearning.AI); PyTorch for Deep Learning; Agent Development (Hugging Face), AWS Cloud Practitioner
