**VINAY KUMAR CHAKALI**
New York, NY (open to relocate)
475-344-9717 | cvinaykumaar@gmail.com | linkedin.com/in/vinayvny | cvinaykumar.com

## EDUCATION

**Quinnipiac University** | **Master of Science - Computer Science** | Hamden, CT | May 2026

- **Relevant Coursework**: Data Structures & Algorithms, Distributed Operating Systems, Database Systems, Cybersecurity, Software System Design (UML), Deep Learning, Cloud Computing & Microservices.
- **Certifications**: LangChain & RAG Systems (Deep Learning.AI) | Docker & Kubernetes for Developers (KodeKloud).

## WORK EXPERIENCE

**Starlite Infotech** | **Full Stack Software Engineer** | Bengaluru, India | Jan 2023 - Aug 2024

- Delivered full-stack features for core product modules using **Python**, **React.js**, **TypeScript**, and **Node.js**, shipping **REST APIs** and responsive UI used in daily operations.
- Fixed slow, error-prone frontend screens by rebuilding them for performance and accessibility, reducing initial render time by **~25%** and lowering UI defects caught in QA.
- Cut bugs reaching production by adding automated **PyTest** and **Jest** testing into the **CI/CD pipeline**.
- Resolved slow API responses by refactoring **PostgreSQL** queries and adding indexing, reducing average response time by **~30%** on the affected endpoints.
- Removed environment inconsistencies by containerizing core services with **Docker**, improving deployment reliability across dev, staging, and production.

## PROJECT EXPERIENCE

**Polish Music Matching Platform** | **Full Stack Software Engineer (Personal Project)** | New York, NY | Jun 2025

- Built a real-time, **high-concurrency** platform to match users within a **30-second** active window, using **FastAPI** and **WebSockets**.
- Solved live-matching latency by tuning the matching and messaging path, returning results to concurrent users **within seconds under load**.
- Protected **distributed application data** with **JWT** and **bcrypt** authentication plus dual-layer geolocation checks.
- Prevented regressions ahead of cloud deployment by writing unit tests across authentication and **WebSocket** flows.

**Book Data Pipeline** | **Backend Software Engineer (Personal Project)** | New York, NY | Jun 2025

- Replaced a slow manual book-catalog process by building a **Python** ingestion pipeline with **Requests** and **BeautifulSoup**.
- Kept the data layer clean and consistent with a normalized **SQLite** schema using **UNIQUE constraints** and **INSERT-OR-IGNORE** deduplication logic.
- Exposed the data safely through **FastAPI REST endpoints** with **parameterized queries**, pagination, and **SQL LIKE** search to guard against injection.

## TECHNICAL SKILLS

- **Languages: Python,** JavaScript, TypeScript, SQL, C++, HTML5, CSS3
- **Frameworks & Libraries:** React.js, Node.js, Express.js, FastAPI, SQLAlchemy, Pydantic, Tailwind CSS
- **Databases:** PostgreSQL, MySQL, MongoDB, SQLite
- **Core CS:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Low Level Design, Multithreading & Concurrency, Distributed Systems
- **AI:** LLM APIs (OpenAI, Anthropic), RAG, LangChain, LangGraph
- **Tools & Cloud:** Docker, Kubernetes, CI/CD, Git, GitHub, GitLab
