First-Class Data Science MSc & Mathematics BSc graduate specializing in Interpretable ML (XAI) and statistical modelling. Delivered geospatial analytics pipelines for the Met Office and predictive risk models for the education sector. Proficient in Python, SQL, and SHAP.

EDUCATION & CERTIFICATIONS

University of Leeds — Leeds, UK
MSc in Data Science and Analytics
- Modules: Statistics (Distinction), Data Science (1st), Machine Learning (Distinction)
- Dissertation: Unsupervised Machine Learning of Rainfall Patterns (1st)

University of Delhi — Delhi, IN
BSc (Hons) in Mathematics

MITx: *Machine Learning with Python*, AWS Certified: *Data Analytics*, *Data Visualisation with Tableau* - UC Davis, Kaggle Learn: *Advanced SQL*, Forage: *Data Analytics Job Simulation Deloitte*

WORK EXPERIENCE

MET Office — Leeds, UK
Machine Learning Researcher (Dissertation) — April 2025 - August 2025
- Built an **interpretable ML pipeline on UKCP18** climate data, classifying 300+ rainfall patterns across the UK.
- **Reduced feature complexity by 75%**, enabling clearer communication of rainfall types to assessors.
- **Produced 40+ visual maps and datasets** to enhance UK rainfall forecasting and climate risk assessments.

Lemar Education and Service Society — Hyderabad, IN
Data Scientist — June 2023 - August 2024
- **Developed and optimized a Random Forest predictive model** that accurately identified students with financial needs, **achieving an 85% recall rate and increasing early scholarship allocations** to high-risk students by 40%, resulting in improved resource distribution.
- Analyzed data to **uncover a 15% proficiency gap in STEM subjects** between homeschooled students and those in traditional classrooms, informing targeted intervention strategies.
- Facilitated collaborative data sessions with 27 teachers, translating complex datasets into **tailored strategies that contributed to a 15% boost in student engagement** and academic outcomes.

Dev Town — Delhi, IN
Data Analyst Intern — December 2021 - March 2022
- Built fraud detection and **predictive maintenance models on 100k+ records** using Random Forest/XGBoost, **improving detection accuracy by 12% and precision by 85%**.

PROJECT EXPERIENCE

Explainable AI (XAI) for Credit Risk Scoring
- **Developed a fraud-sensitive XGBoost classifier** to detect loan defaults, achieving a **20% improvement in recall** to minimize financial exposure (Python, SHAP, XGBoost).

Clinical Diagnostic Support System
- **Engineered an interpretable Logistic Regression model** to identify cardiovascular risks, prioritizing high precision to **reduce false negatives in patient diagnosis** (Python, Pandas, Matplotlib, Logistic Regression).

SUMMARY OF SKILLS

Research & Writing: "Business Use of Data Science Churn Prediction," IJRASET, Nov 2021
Programming & Data Science: Python, R, SQL, Scikit-learn, SHAP, Feature Engineering, Machine Learning, Model Evaluation, Model Deployment, Time Series, NLP, Data Wrangling, Tableau, Power BI
