GORANSH DHINGRA

New York, NY | 203-812-0835 | goranshdhingra532@gmail.com | linkedin.com/in/goransh

EDUCATION & CERTIFICATIONS

Master of Science (M.S.) in Biochemistry & Molecular Biology | GPA: 4.0/4.0 **Expected May 2027**
Pace University | New York, NY

Bachelor of Technology (B.Tech.) in Biotechnology | Maharishi Dayanand University, India

CERTIFICATIONS: Basic Infertility for Healthcare Providers, American Society for Reproductive Medicine (ASRM) | Introduction to Genomic Technologies, Johns Hopkins University (Coursera)

PROFESSIONAL EXPERIENCE

Pace University - Marcello Laboratory **February 2026 – Present**
Graduate Research Assistant

- Investigate expression patterns across 20+ fertilization-related SPE-family genes by integrating bioinformatics resources, gene-expression data, and scientific literature to advance reproductive biology research using *C. elegans*.
- Analyze 20+ gene-expression datasets and biological annotations, validating expression clusters through cross-database comparisons to improve the accuracy and traceability of research findings.
- Standardize 40+ gene-expression records by consolidating biological annotations, literature, and database evidence into structured datasets that accelerated comparative gene analysis and improved research traceability.
- Resolve 17+ experimental and computational discrepancies by validating source data, investigating conflicting annotations, and strengthening scientific interpretation through evidence-based research findings.
- Presented 10+ research findings through laboratory discussions and academic presentations by translating molecular biology and reproductive genetics data into evidence-supported scientific conclusions.

Sonakshi IVF Centre and Children Hospital **January 2024 - May 2024**
Andrology and Embryology Intern

- Processed semen analyses across 40+ patient specimens under supervision by evaluating sperm parameters, preparing specimens, and supporting andrology laboratory workflows in accordance with IVF laboratory protocols.
- Supported assisted reproductive technology (ART) procedures across 17+ patient specimens through specimen handling, documentation, and supervised sperm preparation, oocyte handling, embryo culture, and cryopreservation.
- Verified 30+ patient specimens, laboratory documentation, and sample traceability by following SOPs, sterile technique, and quality control practices to maintain accuracy throughout IVF laboratory operations.
- Identified 20+ documentation and specimen discrepancies by validating patient identifiers with supervising embryologists before laboratory processing, reinforcing quality assurance and patient safety standards.
- Observed 30+ multidisciplinary IVF cases from specimen collection through embryology workflows, strengthening clinical understanding of patient-centered reproductive care and assisted reproduction.

Agilus Diagnostics (SRL) **June 2023 - August 2023**
Molecular Diagnostic Intern

- Performed PCR-related workflows across 30+ clinical specimens, supporting HLA typing and transplant compatibility testing while maintaining specimen integrity.
- Processed clinical specimens across 30+molecular diagnostic workflows by assisting with DNA preparation, sample verification, contamination control, and laboratory documentation in accordance with SOPs and quality standards.
- Supported HLA typing, CDC crossmatch, and donor-specific antibody (DSA) testing across 40+ workflows by verifying specimen identity and following quality control procedures to ensure diagnostic accuracy.

Akshar Molecules **June 2022 - August 2022**
Quality Control Laboratory Intern

- Performed analytical testing across 30+ Nutraceutical softgels pharmaceutical samples by following SOPs, documenting quality control results, and supporting laboratory procedures to ensure compliance with established quality standards.

NVK Diagnostic and Research Center **September 2021 - October 2021**
Laboratory Technician Intern

- Prepared biochemical testing across 35+ diagnostic samples by supporting specimen preparation, analytical workflows, and laboratory documentation in accordance with established SOPs.

SKILLS

Assisted Reproductive Technology (ART) | Clinical Embryology | Andrology | Reproductive Biology | Molecular Biology | Biochemistry | Semen Analysis | Sperm Preparation | Sample Preparation | Embryology Laboratory Operations | Molecular Diagnostics | PCR | HLA Typing | CDC Crossmatch | Donor-Specific Antibody (DSA) Testing | Bioinformatics | Gene Expression Analysis | Biological Data Analysis | Microscopy | Gel Electrophoresis | DNA Analysis | Specimen Handling | Laboratory Documentation | Quality Control | Quality Assurance | SOP Compliance | Sterile Technique | Experimental Troubleshooting | Scientific Literature Review | Scientific Presentations
