WORK EXPERIENCE

Hydrow **Boston, MA**

Product Manager *June 2025 - Present*

- Led end-to-end beta program for LYQUID, reaching 1,300+ users for survey feedback and screening, and qualifying phased beta cohorts (10 at-home, 130 in-office) to ensure product readiness for initial user launch
- Synthesized feedback into prioritized product recommendations, secured C-suite alignment, and translated them into updates in the PRD and Jira stories for cross-functional execution.
- Defined product metrics & monitoring workflows using Amplitude & Salesforce, partnered with engineering on real-time alerts, and facilitated triage sessions to resolve ~95% of critical issues within the first hour.
- Refined the user benchmarking flow, reducing onboarding blockers for beta testers from 56% → 0%, and defined the Build Your Own Workout feature for upcoming Spring release.

Turing **Boston, MA**

Data Product Associate *July 2024 - June 2025*

- Supported enterprise LLM use cases and prompt implementation, including multi-shot prompting, contributing to a 25% reduction in hallucinations in production deployments.
- Developed automated pipelines for Q&A extraction and embeddings analysis, processing 10k+ entries to surface data gaps and reduce manual review.
- Conducted structured evaluations across multiple LLMs, grading performance against golden datasets and domain-specific rules to ensure compliance and inform model selection.
- Assisted in RLHF and Fine-tuning experiments, contributing 150+ annotated responses, stress-testing models with few-/multi-shot prompts, and producing reproducible insights with Python and visualization tools.

Analog Devices **Boston, MA**

Product Analyst *Jan. 2024 - June 2024*

- Owned market assessment across AgTech seed-to-shelf value chain, quantifying $1B+ TAM and mapping opportunities directly to Analog Devices' sensing, power, and embedded analytics capabilities.
- Built decision-grade forecasting models (30+ variables) in Excel using Power Query and DAX, enabling leadership to prioritize 3 high-confidence opportunities from 10+, one advancing to further exploration.
- Supported executive pitch for a green hydrogen growth initiative by leading expert interviews and stakeholder workshops, validating product–market fit and strengthening the case for EIS-based solution expansion.

Northeastern Research Computing **Boston, MA**

Product Documentation Developer *July 2022 - July 2023*

- Analyzed 300+ support tickets to identify top 5 pain points and created roadmap prioritizing 15 self-service guides for HPCC platform, reducing support ticket volume by 35%
- Redesigned document approval workflow by mapping processes and increasing SME engagement, reducing approval cycle time by 13% and improving first-time approval rates by 25%
- Led migration of 100+ documents to new information architecture with version control governance, improving discoverability and driving 15% increase in user satisfaction

IOTIOT.in **Chennai, IN**

Technical Product Manager *Aug. 2020 - June 2021*

- Directed product definition and development of Industrial Cloud Camera platform, delivering an MVP (live streaming, cloud storage, face detection) 2 months before deadline using iterative agile planning.
- Coordinated cross-functional teams (firmware, ML, cloud) for launch readiness, overseeing beta pilots with 20+ enterprise users on AWS infrastructure.
- Facilitated engineering collaboration via Git-managed workflows, contributing to a 30% reduction in integration issues and faster release cycles through improved code quality and PR tracking.

PROJECT EXPERIENCE

Project **Boston, MA**

ADAS Semiconductor Opportunity Analysis, Multi-agent AI System (Values change every Monday) *Dec. 2025*

- Created product requirements and technical specifications for an AI-powered market research tool, defining agent interdependencies and context-passing mechanisms that enable progressive insight refinement to
- Automated PMM workflow: market sizing ($3.2B→$8.5B projections), competitive analysis (13 solutions), pain point extraction (12 identified), and strategic positioning reducing research cycle from weeks to minutes.

Vellore Institute of Technology **Chennai, India**

Autonomous Car with Accident Detection System, Capstone Project *Jan. 2021 – Mar. 2021*

- Designed an autonomous vehicle system utilizing computer vision and neural network training for navigation and obstacle detection, achieving 92% accuracy in accident type identification (rollover, collision, fall-off)
- Integrated IBM Cloud, Node-Red, and Twilio to enable real-time GPS tracking and emergency alert systems

EDUCATION

Northeastern University **Boston, MA**

Master of Science in Engineering Management *Graduation Date: July 2023*

Vellore Institute of Technology **Chennai, India**

Bachelor of Technology in Electronics and Communication Engineering *Graduation Date: May 2021*

SKILLS

Product & Strategy: Roadmapping & prioritization, Requirements gathering & definition, Product lifecycle management, User research / discovery, Stakeholder management & communication, Metrics & success measurement

Execution & Delivery: Cross-functional team leadership, Sprint planning & backlog management, Deployment & release management, Customer success & adoption, Agile & Scrum Methodologies

Analytics & Data: Product analytics (Amplitude, Mixpanel, GA), A/B testing & experimentation, SQL & Python, Data visualization & dashboards

AI / Technical PM skills: Generative AI / LLM products, Machine learning concepts & model evaluation, Prompt engineering & AI agent design, Collaboration with data science / ML teams, APIs / system integration / architecture understanding

Tools: Jira/Confluence, Datadog, Power BI, Tableau , Excel, Collaboration & documentation, Claude Projects
